Commitment to achieving Net Zero

Secomak is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2025

Emissions reduction targets

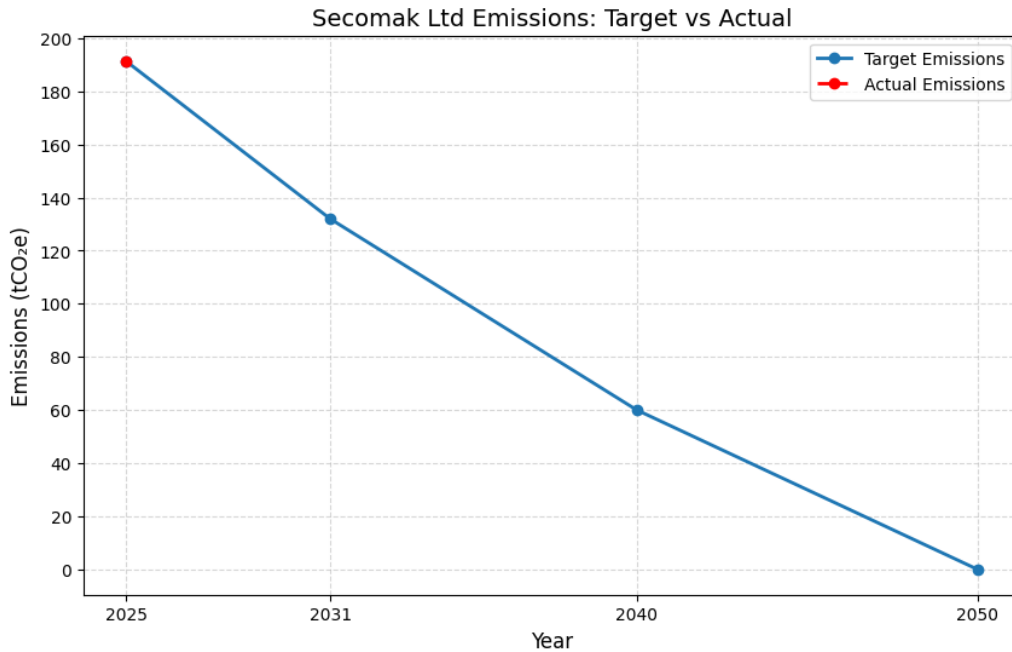

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 132 tCO₂e by 2031. This is a reduction of 30%

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

With no prior assessment of emissions by Secomak Ltd before 2025, the extent of the reduction resulting from implemented projects remains uncertain.

Completed Projects:

Development of a formal Carbon Reduction Plan and annual footprint measurement covering Scope 1, 2 and relevant Scope 3 sources

Staff awareness and behavioural change programme to reduce unnecessary energy use and travel

Staff policy to shut down non-essential equipment out of hours

Energy efficiency settings applied to all IT equipment and monitors

Increased use of virtual meetings (Teams/Zoom) to avoid unnecessary travel

Move toward paper-light / digital documentation and cloud storage

Adopted a cycle-to-work scheme to help encourage low carbon commuting by shifting away from car-based travel.

Establishment of a 5-year target to reduce emissions by **30% by 2031**
